

# Ansible Linux Automation Workshop

Introduction to Ansible for Red Hat Enterprise Linux Automation  
for System Administrators and Operators

# What you will learn

- ▶ How Ansible Works
- ▶ Understanding Modules, Tasks, Playbooks
- ▶ Automation Controller Basics & Key Concepts
- ▶ Utilizing Projects & Job Template
- ▶ Role-based Access Control (RBAC)
- ▶ Self-service IT via surveys
- ▶ Overview of System Roles for Red Hat Enterprise Linux

---

# Introduction

Topics Covered:

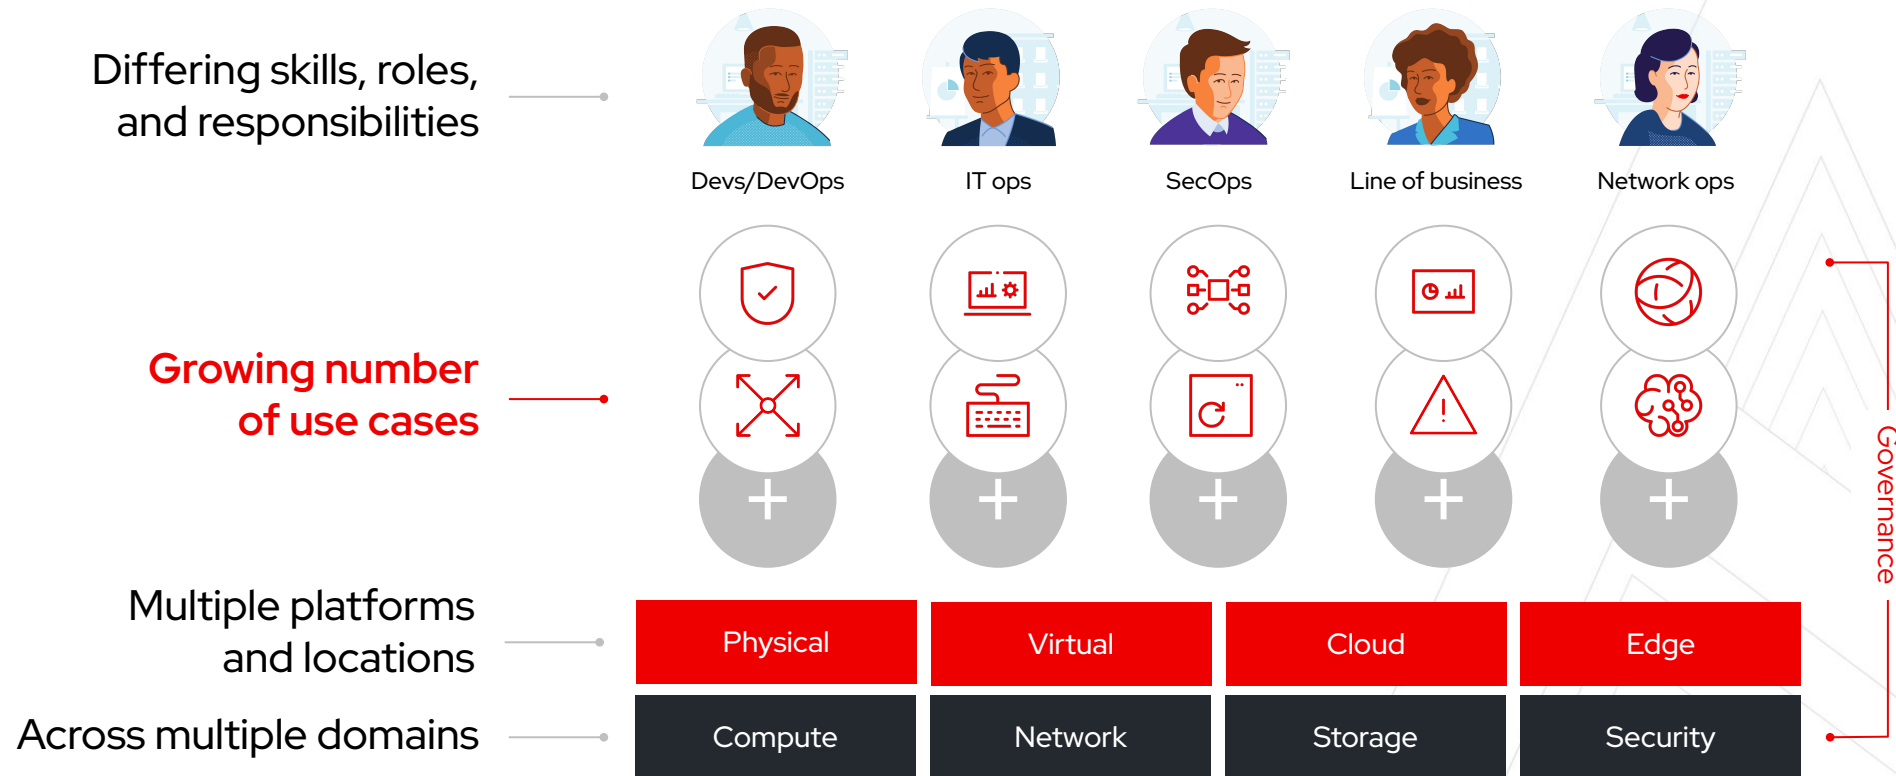

- Why the Ansible Automation Platform?
- What can it do?

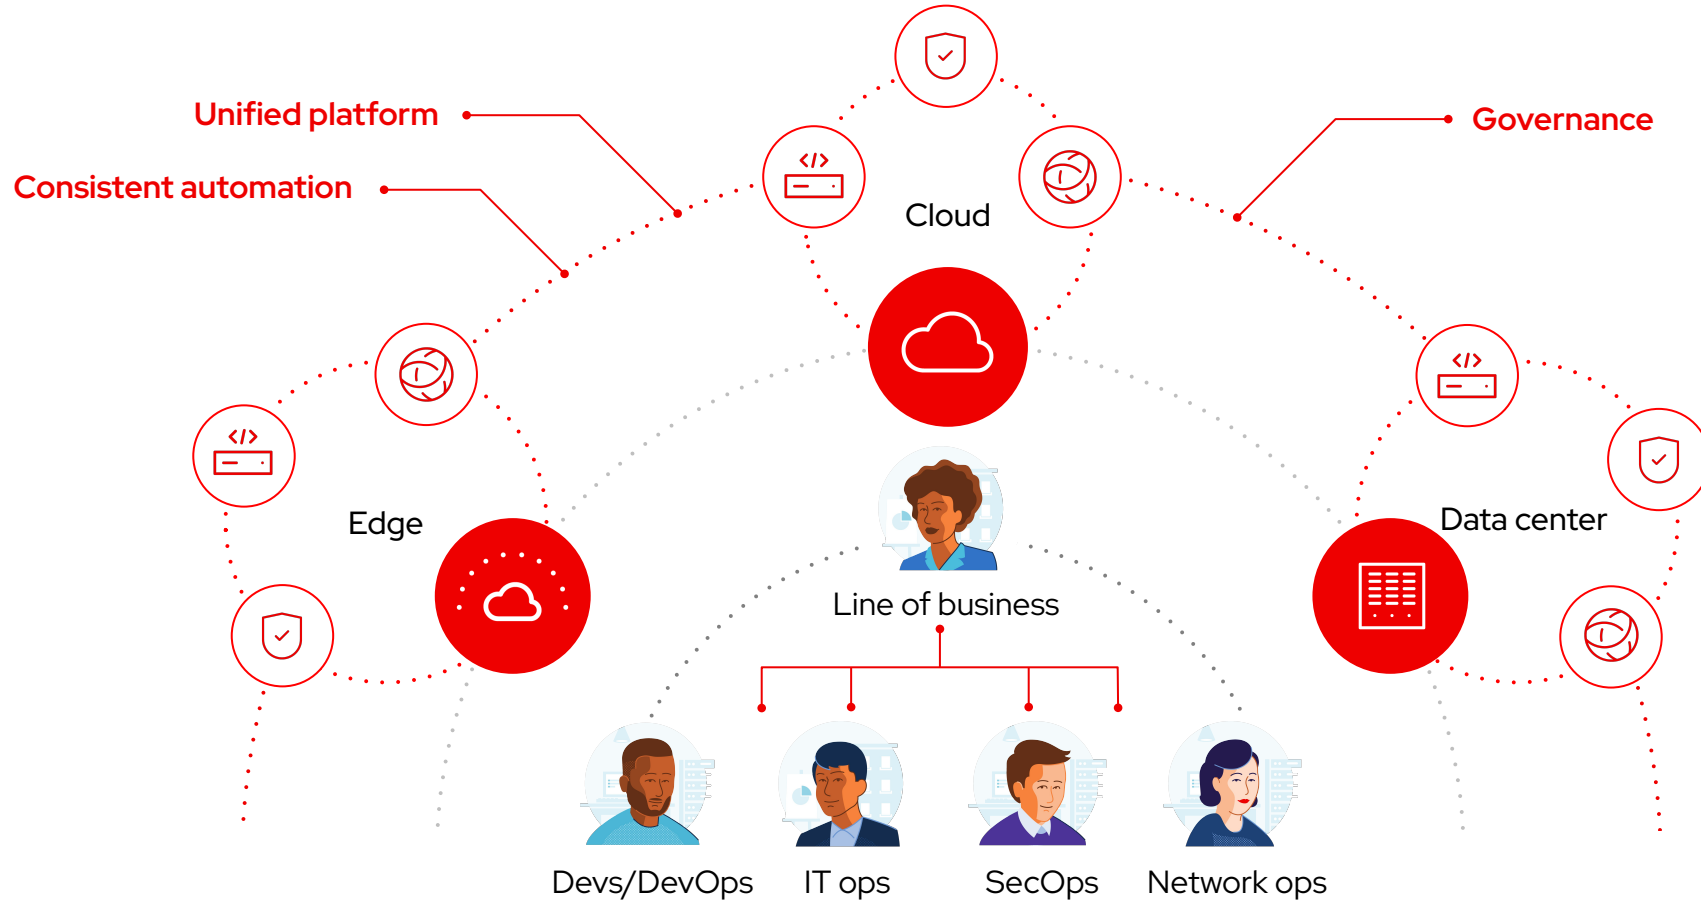

An enterprise needs to unlock its automation advantage

# Many organizations share the same challenge.

# The solution? **Break down the silos.**

# Why Ansible Automation Platform?

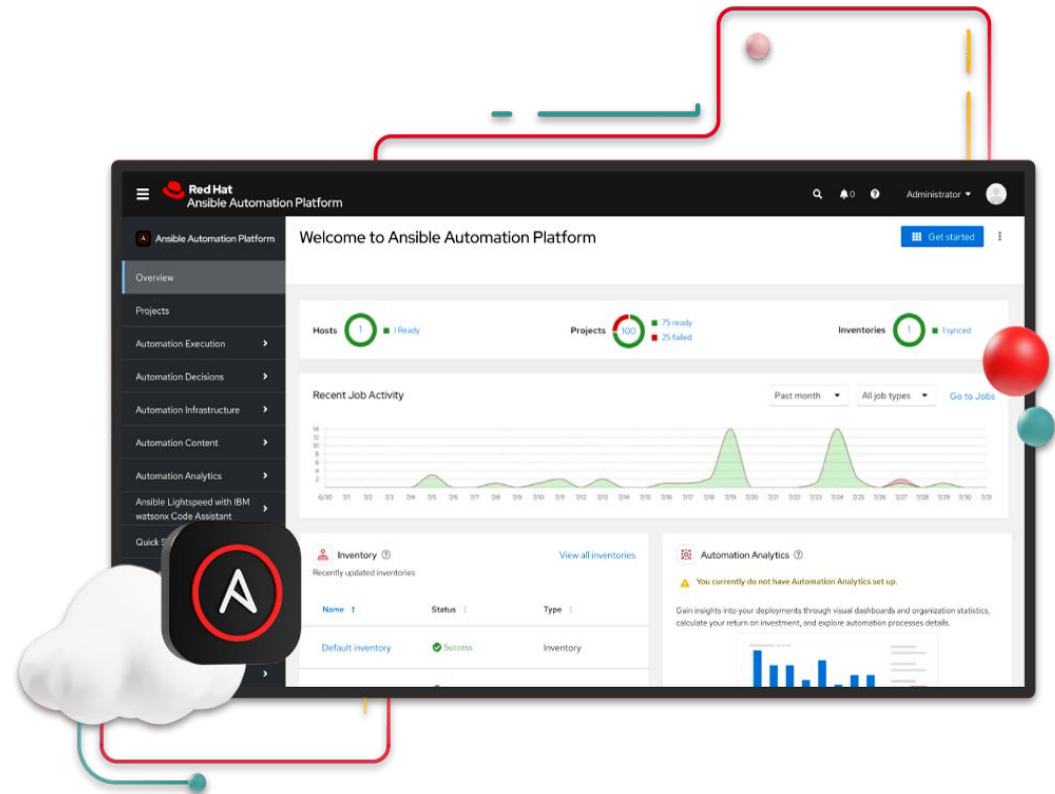

## To unlock your automation advantage

Red Hat Ansible is becoming increasingly mission-critical for customers who rely on automation to bridge skills gaps, tame operational complexity across the enterprise, and mitigate costly tool sprawl.

Our goal with Red Hat Ansible Automation Platform 2.6 is to make it easier for every customer to fully unlock the potential of automation to transform IT - and deliver strategic advantages to the business.

This latest release is engineered to help our customers:

- > **Accelerate automation adoption at scale**, with a reimagined automation platform experience, new features for enhanced usability, and tools for more effective collaboration and coordination.
- > **Empower automation engineers**, with integrated developer tooling and generative AI capabilities designed to bolster ease and efficiency for a range of skill sets and experience across the entire automation creation lifecycle.
- > **Orchestrate across the enterprise**, with event-driven automation capabilities that make intelligence from other tools more actionable, along with a robust ecosystem of integrations that put true end-to-end automation within reach.

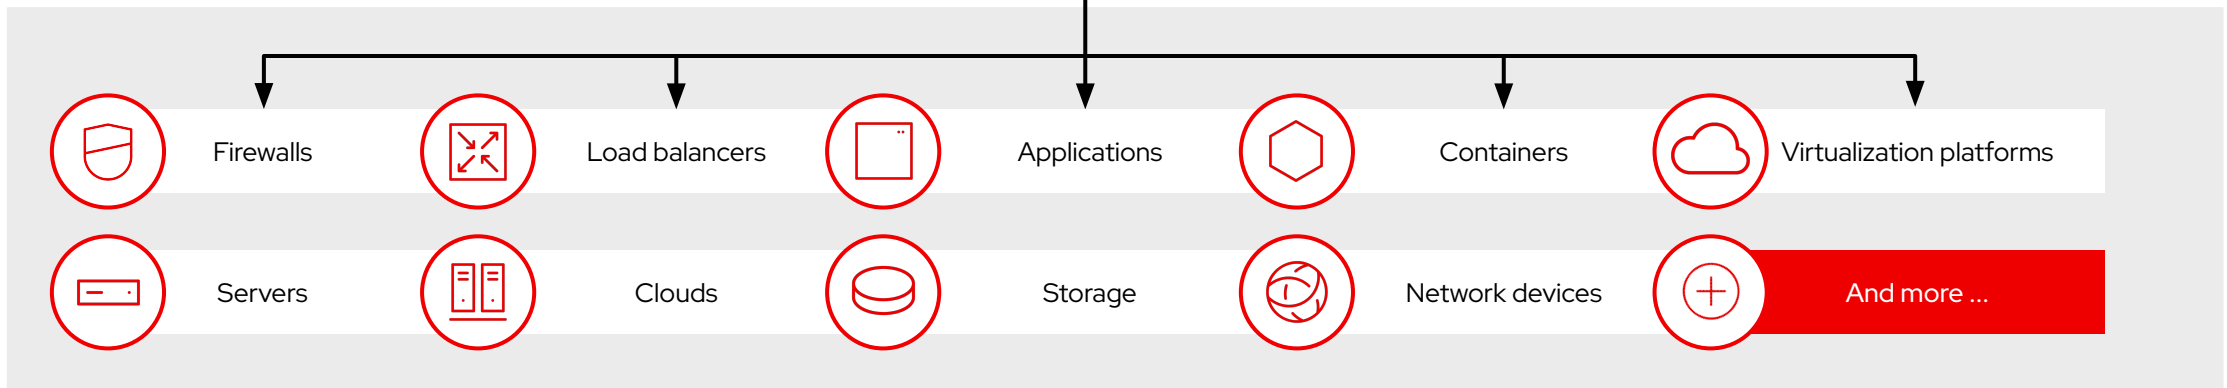

# Automate the deployment and management of automation

# Red Hat is *the leader* in the 2024 Forrester Wave™: Infrastructure Automation Platforms

## Key takeaways from vendor profile

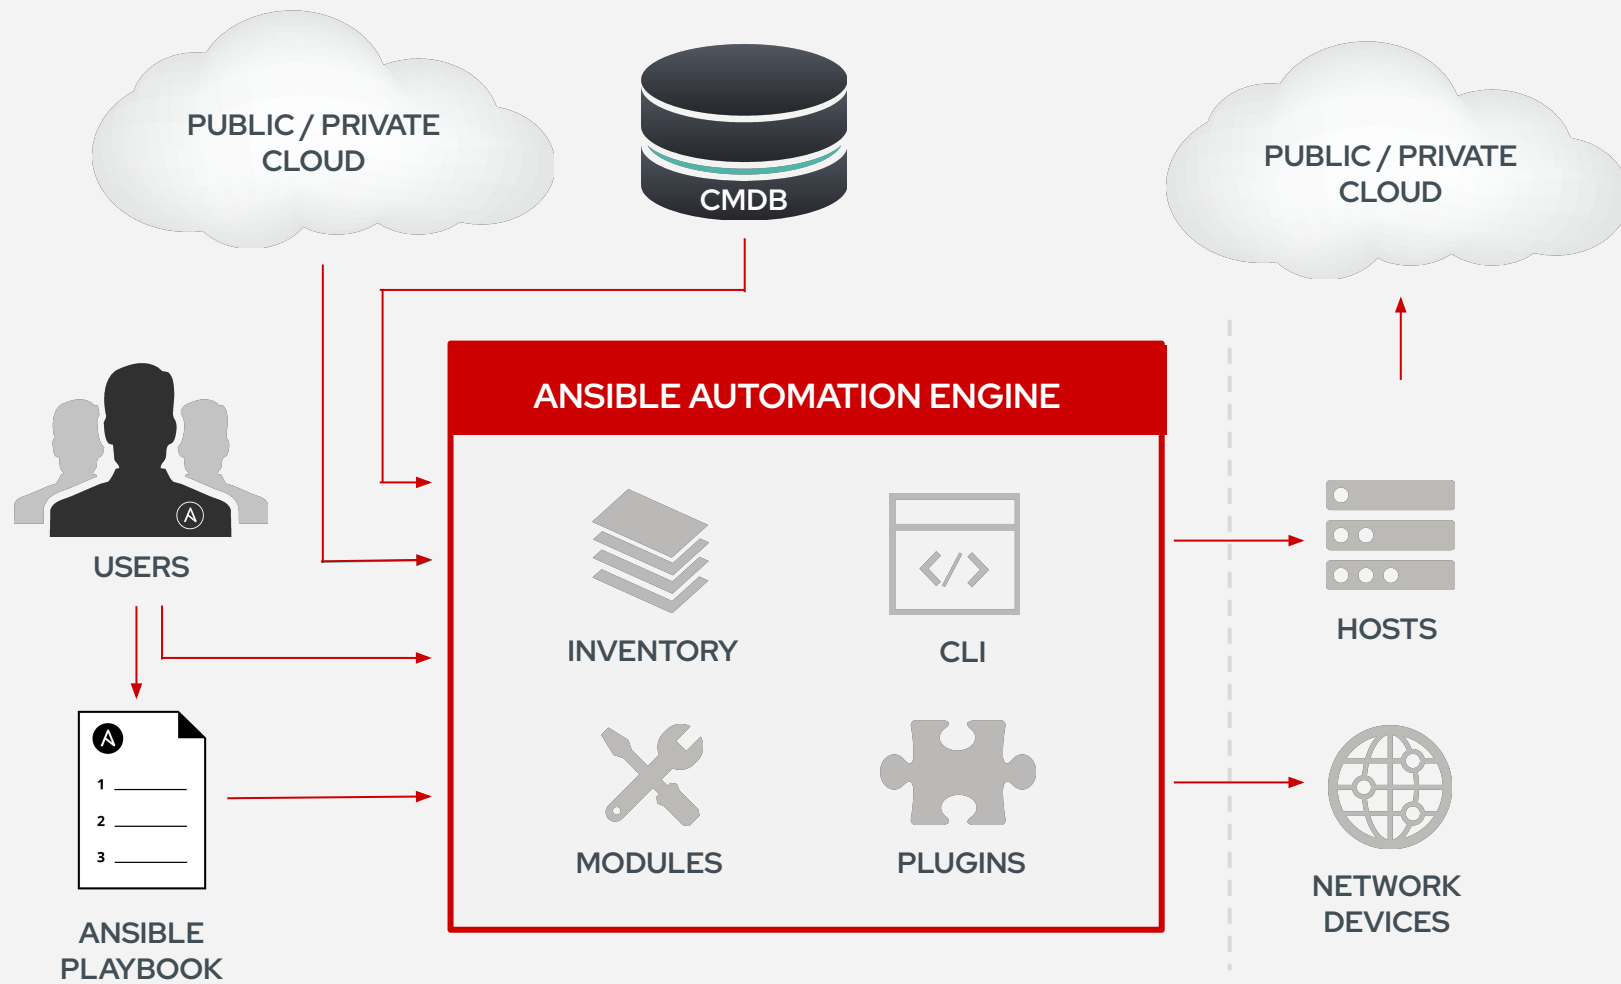

- > “The Ansible Automation Platform is a comprehensive solution for various use cases, expanding into event-driven automation to reduce human intervention and reduce the burden of writing code for each scenario.”
- > “Red Hat’s strategy for a collective and inclusive user community is spurring growth. Its vision and partner ecosystem are both strengths...supported by the community, Red Hat Ansible addresses numerous automation use cases.”
- > “Red Hat offers a good all-around automation tool for organizations that aim to enable users to develop mature automation and integrate technology silos.”

# The Ansible Basics

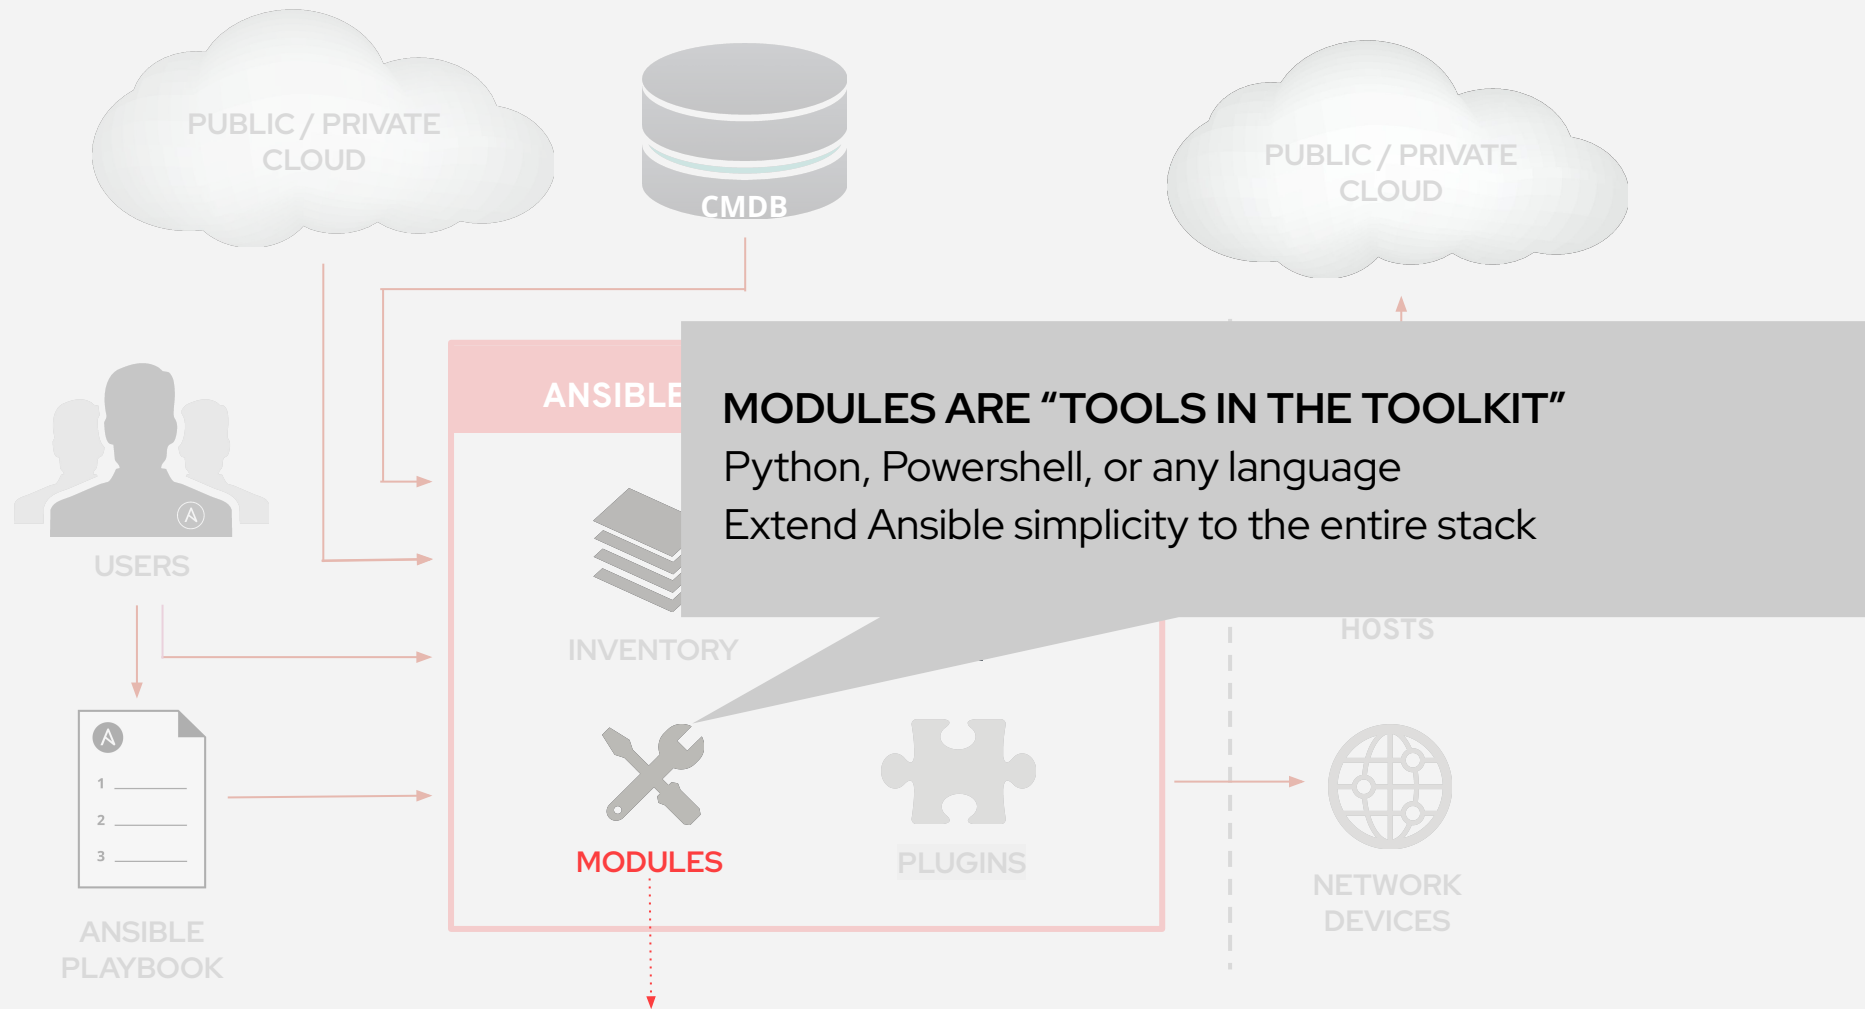

# Ansible playbooks

```
---
- name: Install and start apache
  hosts: web
  become: true

  tasks:
    - name: Ensure the httpd package is installed
      ansible.builtin.package:
        name: httpd
        state: present

    - name: Create the index.html file
      ansible.builtin.template:
        src: files/index.html
        dest: /var/www/html/

    - name: Start the httpd service if needed
      ansible.builtin.service:
        name: httpd
        state: started
```

```

- name: Create the index.html file
ansible.builtin.template:
  src: files/index.html
  dest: /var/www/html/

```

# LINUX AUTOMATION

**150+**  
Linux Modules

**AUTOMATE EVERYTHING  
LINUX**

**Red Hat Enterprise Linux, BSD,  
Debian, Ubuntu and many more!**

# Exercise 1

Topics Covered:

- Ansible Inventories
- Ansible Playbooks Basics
- Running an Ansible Playbook

# Ansible Inventory. The systems that a playbook runs against.

## What are they?

- ▶ List of systems in your infrastructure that automation is executed against

## How do they work?

- ▶ Defines the systems that Ansible manages and targets for automation.
- ▶ Organizes hosts into groups (e.g., web servers, databases) for better management.
- ▶ Group variables apply settings across multiple systems efficiently.
- ▶ Host-specific variables allow detailed customization for individual systems.

```
[web]
webserver1.example.com
webserver2.example.com

[db]
dbserver1.example.com

[switches]
leaf01.internal.com
leaf02.internal.com
```

# Ansible Inventory. **The systems that a playbook runs against.**

## The Basics

- ▶ An example of a static Ansible inventory including systems with IP addresses as well as fully qualified domain name (FQDN)

```
[myservers]
10.42.0.2
10.42.0.6
10.42.0.7
10.42.0.8
10.42.0.100
host.example.com
```

# Ansible Inventory

```
[app1srv]
appserver01 ansible_host=10.42.0.2
appserver02 ansible_host=10.42.0.3

[web]
node-[1:30]

[web:vars]
apache_listen_port=8080
apache_root_path=/var/www/mywebdocs/

[all:vars]
ansible_user=kev
ansible_ssh_private_key_file=/home/kev/.ssh/id_rsa
```

# Ansible playbook

## A play

```
---  
- name: Install and start apache  
  hosts: web  
  become: true  
  
  tasks:  
    - name: Ensure the httpd package is installed  
      ansible.builtin.package:  
        name: httpd  
        state: present  
  
    - name: Create the index.html file  
      ansible.builtin.template:  
        src: files/index.html  
        dest: /var/www/html/  
  
    - name: Start the httpd service if needed  
      ansible.builtin.service:  
        name: httpd  
        state: started
```

# Ansible playbook

## A task

```
---
- name: Install and start apache
  hosts: web
  become: true

tasks:
  - name: Ensure the httpd package is installed
    ansible.builtin.package:
      name: httpd
      state: present

  - name: Create the index.html file
    ansible.builtin.template:
      src: files/index.html
      dest: /var/www/html/

  - name: Start the httpd service if needed
    ansible.builtin.service:
      name: httpd
      state: started
```

# Ansible playbook

**A module**

```
---
- name: Install and start apache
  hosts: web
  become: true

  tasks:
    - name: Ensure the httpd package is installed
      ansible.builtin.package:
        name: httpd
        state: present

    - name: Create the index.html file
      ansible.builtin.template:
        src: files/index.html
        dest: /var/www/html/

    - name: Start the httpd service if needed
      ansible.builtin.service:
        name: httpd
        state: started
```

Running an Ansible playbook. The most important colors of Ansible.

A task executed as expected, no change was made.

A task executed as expected, making a change.

A task failed to execute successfully.

# Running an Ansible Playbook

```
[user@ansible] $ ansible-playbook apache.yml

PLAY [webservers] *****

TASK [Gathering Facts] *****
ok: [web2]
ok: [web1]
ok: [web3]

TASK [Ensure httpd package is present] *****
changed: [web2]
changed: [web1]
changed: [web3]

TASK [Ensure latest index.html file is present] *****
changed: [web2]
changed: [web1]
changed: [web3]

TASK [Restart httpd] *****
changed: [web2]
changed: [web1]
changed: [web3]

PLAY RECAP *****
web2          : ok=1    changed=3 unreachable=0 failed=0
web1          : ok=1    changed=3 unreachable=0 failed=0
web3          : ok=1    changed=3 unreachable=0 failed=0
```

# Lab Time

Complete Exercise 1 –  
Writing Your First Playbook

---

# Exercise 2

Topics Covered:

- Working with Ansible Variables
- Working with Ansible Facts

# Ansible Variable Playbook

```
---  
- name: variable playbook test  
  hosts: localhost  
  
  vars:  
    var_one: awesome  
    var_two: ansible is  
    var_three: "{{ var_two }} {{ var_one }}"  
  
  tasks:  
    - name: print out var_three  
      ansible.builtin.debug:  
        msg: "{{ var_three }}"
```

# Ansible Variable Playbook

```
---  
- name: variable playbook test  
  hosts: localhost  
  
  vars:  
    var_one: awesome  
    var_two: ansible is  
    var_three: "{{ var_two }} {{ var_one }}"  
  
  tasks:  
    - name: print out var_three  
      ansible.builtin.debug:  
        msg: "{{ var_three }}"
```

ansible is awesome

# Ansible Facts

## Facts

- ▶ Just like variables, really...
- ▶ ... but: coming from the host itself!
- ▶ Check them out with the setup module

```
tasks:
  - name: Collect all facts of host
    ansible.builtin.setup:
      gather_subset:
        - 'all'
```

# Ansible Facts Playbook

```
---  
- name: Ansible Facts playbook  
  hosts: localhost  
  gather_facts: true  
  
  tasks:  
    - name: Define custom fact  
      ansible.builtin.set_fact:  
        server_role: "frontend"  
  
    - name: Use custom and built-in fact  
      ansible.builtin.debug:  
        msg: 'The {{ ansible_hostname }} is assigned the role: {{ server_role }}'
```

```
$ ansible-playbook facts_playbook.yml
```

# Ansible Inventory - Managing Variables In Files

```
$ tree ansible-files/  
├── deploy_index_html.yml  
├── files  
│   ├── dev_web.html

  copy:
    src: "{{ stage }}_web.html"
    dest: /var/www/html/index.html
```

# Lab Time

Complete Exercise 2 – Using Variables

---

# Exercise 3

Topics Covered:

- Projects
- Job Templates

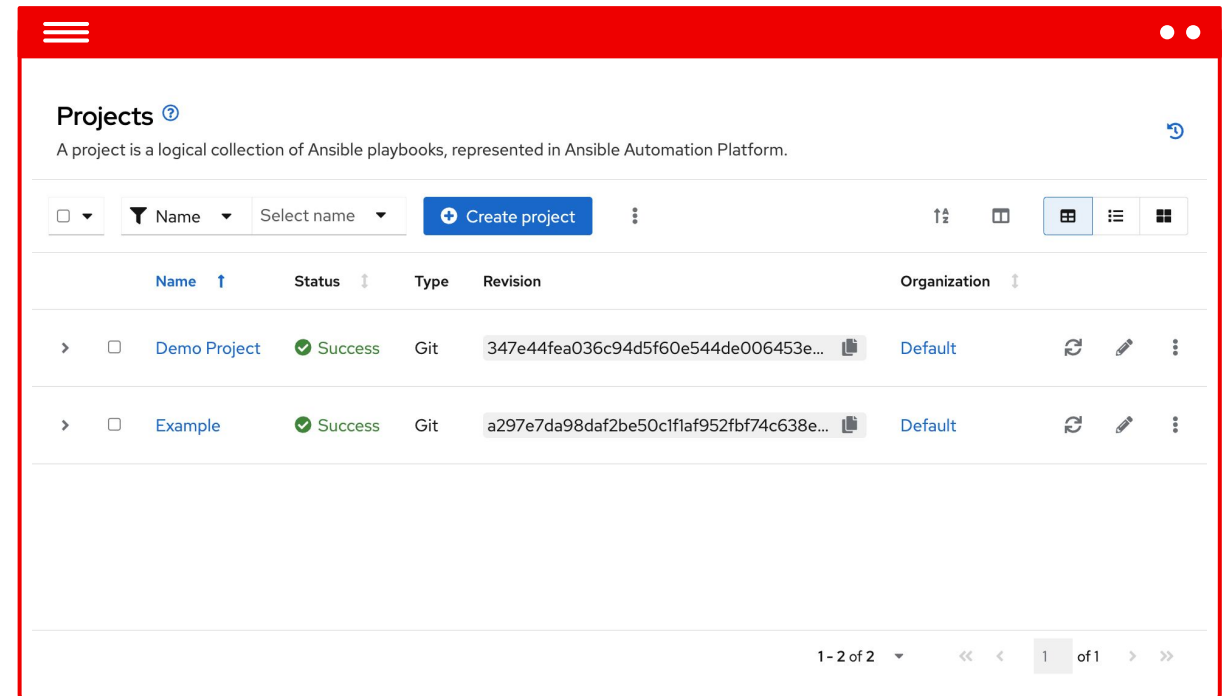

# Projects. Adding your automation content to controller.

## What is it?

Logical collection of your playbooks:

- ▶ Multiple source types supported
- ▶ Source Control Management (SCM) integration and update strategies
- ▶ Role-based access control (RBAC) and schedules

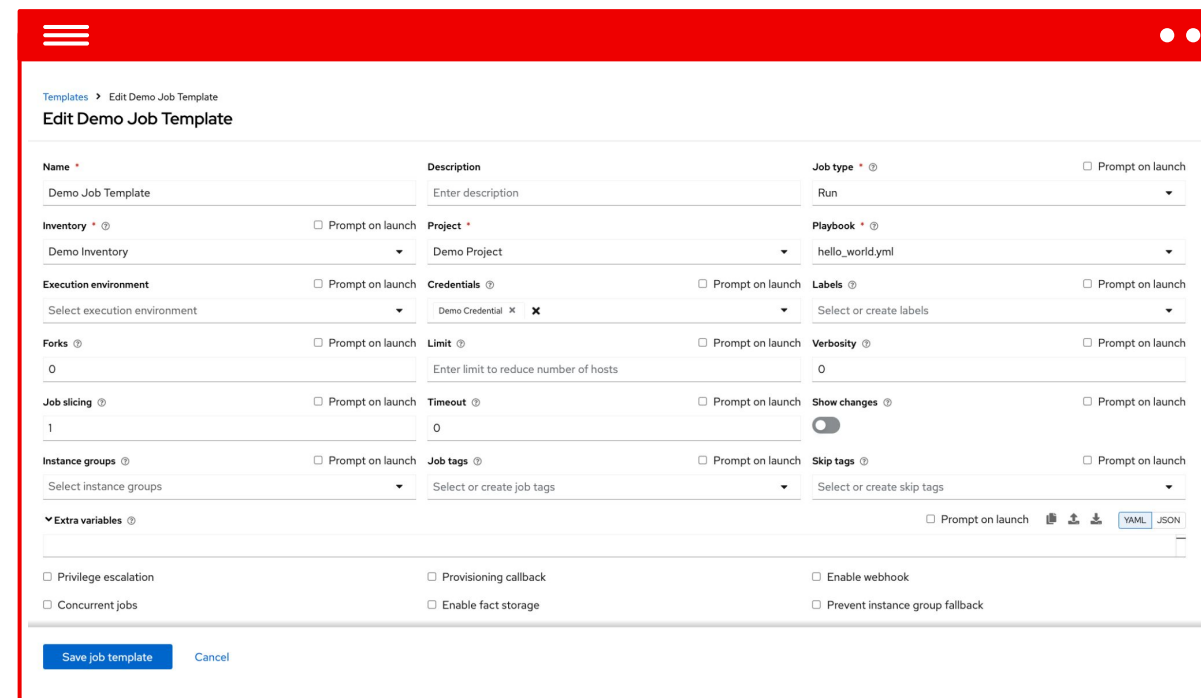

# Job Templates. Bringing it all together.

## What is it?

- ▶ Define and standardize running automation
- ▶ Reusable and shareable
- ▶ Leverage agile practices, such as GitOps and event-driven automation

# Automation jobs. Executing your defined automation.

## What is it?

- ▶ Controller launching an instance of defined automation
- ▶ Relaunch automation jobs
- ▶ Use Job Details to view job outputs
- ▶ Troubleshoot automation execution using filtered views

ID	Name	Status	Type	Duration	Started	Finished
9688	Demo Job Template	Pending	Playbook run			--
9694	Cleanup Job Details	Success	Management job	4s	10/6/2024, 9:00:47 AM	10/6/2024, 9:00:51 AM
9693	Cleanup Expired OAuth 2 Tokens	Success	Management job	4s	10/2/2024, 9:03:10 AM	10/2/2024, 9:03:15 AM
9692	Cleanup Expired Sessions	Success	Management job	3s	10/2/2024, 9:02:47 AM	10/2/2024, 9:02:51 AM
9691	Cleanup Activity Stream	Success	Management job	4s	10/1/2024, 9:00:47 AM	10/1/2024, 9:00:52 AM
9690	Cleanup Job Details	Success	Management job	4s	9/29/2024, 9:00:47 AM	9/29/2024, 9:00:51 AM

# Lab Time

Complete Exercise 3 -  
Projects & Job Templates

---

# Exercise 4

Topics Covered:

- Ansible Surveys

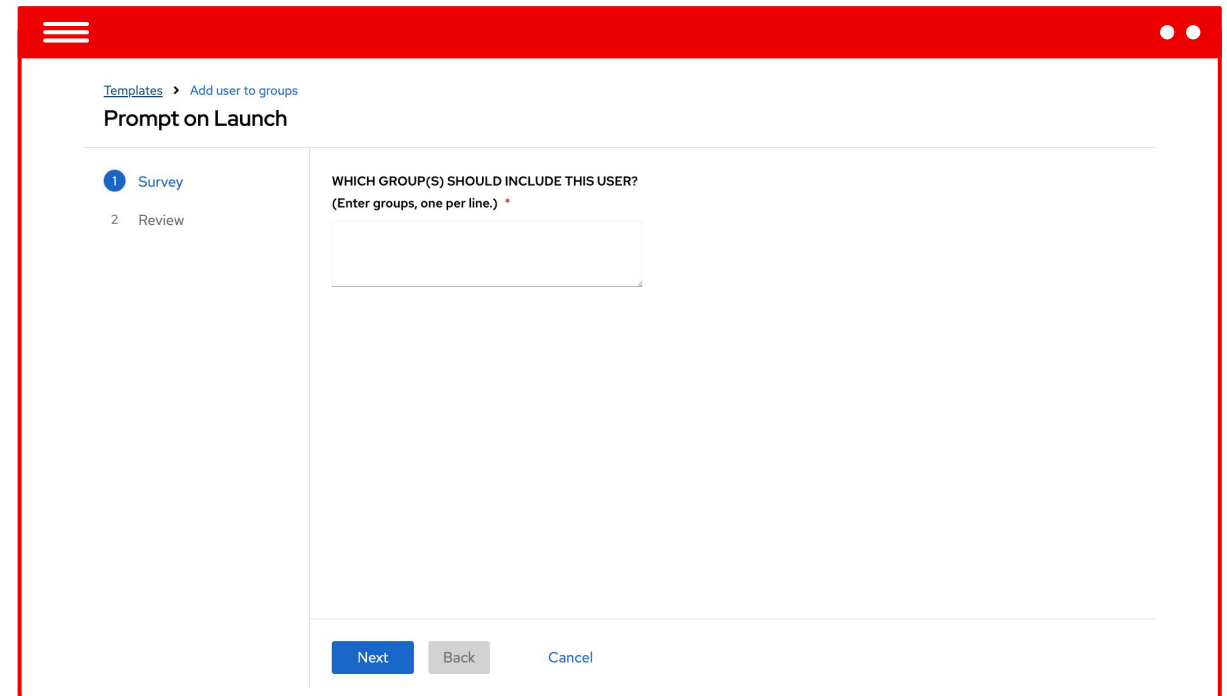

# Automation controller surveys. **Adopt and grow.**

## What is it?

- ▶ User-friendly, self-service interface in automation controller
- ▶ Abstracts complexity using question and answer format
- ▶ Best suited for teams directly accessing automation and close to the automation practice
- ▶ Access and execution governed using controller features

# Creating a Survey (1/2)

Once a Job Template is saved, the **Add Survey Button** will appear  
Click the button to open the Add Survey window.

ADD SURVEY

The screenshot shows the Tower web interface. At the top left is the 'TOWER' logo. The top right shows the user 'admin' and several notification icons. The main content area is titled 'TEMPLATES / Create index.html'. On the left is a dark sidebar with navigation options: VIEWS (Dashboard, Jobs, Schedules, My View) and RESOURCES (Templates, Credentials, Projects, Inventories, Inventory Scripts). The main configuration area is titled 'Create index.html' and has several tabs: DETAILS, PERMISSIONS, NOTIFICATIONS, COMPLETED JOBS, SCHEDULES, and EDIT SURVEY. The 'EDIT SURVEY' tab is highlighted with a red box. Below the tabs are several configuration fields:

- \* NAME**: Create index.html
- DESCRIPTION**: (empty)
- \* JOB TYPE**: (dropdown menu)
- PROMPT ON LAUNCH
- \* INVENTORY**: Workshop Inventory
- PROMPT ON LAUNCH
- \* PROJECT**: Workshop Project
- \* PLAYBOOK**: rhel/apache/apache\_role\_inst...
- PROMPT ON LAUNCH
- CREDENTIALS**: Workshop Credential
- PROMPT ON LAUNCH
- FORKS**: 0
- LIMIT**: web
- PROMPT ON LAUNCH
- \* VERBOSITY**: 0 (Normal)
- PROMPT ON LAUNCH
- JOB TAGS**: (empty)
- PROMPT ON LAUNCH
- SKIP TAGS**: (empty)
- PROMPT ON LAUNCH

# Creating a Survey (2/2)

The Add Survey window allows the Job Template to prompt users for one or more questions. The answers provided become variables for use in the Ansible Playbook.

The screenshot shows the 'Add Survey' window in Ansible Tower. The window title is 'Create index.html | SURVEY'. The left pane, titled 'ADD SURVEY PROMPT', contains the following fields and controls:

- \* PROMPT**: A text input field.
- DESCRIPTION**: A text input field.
- \* ANSWER VARIABLE NAME**: A text input field with a help icon.
- \* ANSWER TYPE**: A dropdown menu.
- REQUIRED**
- CLEAR** and **+ ADD** buttons.

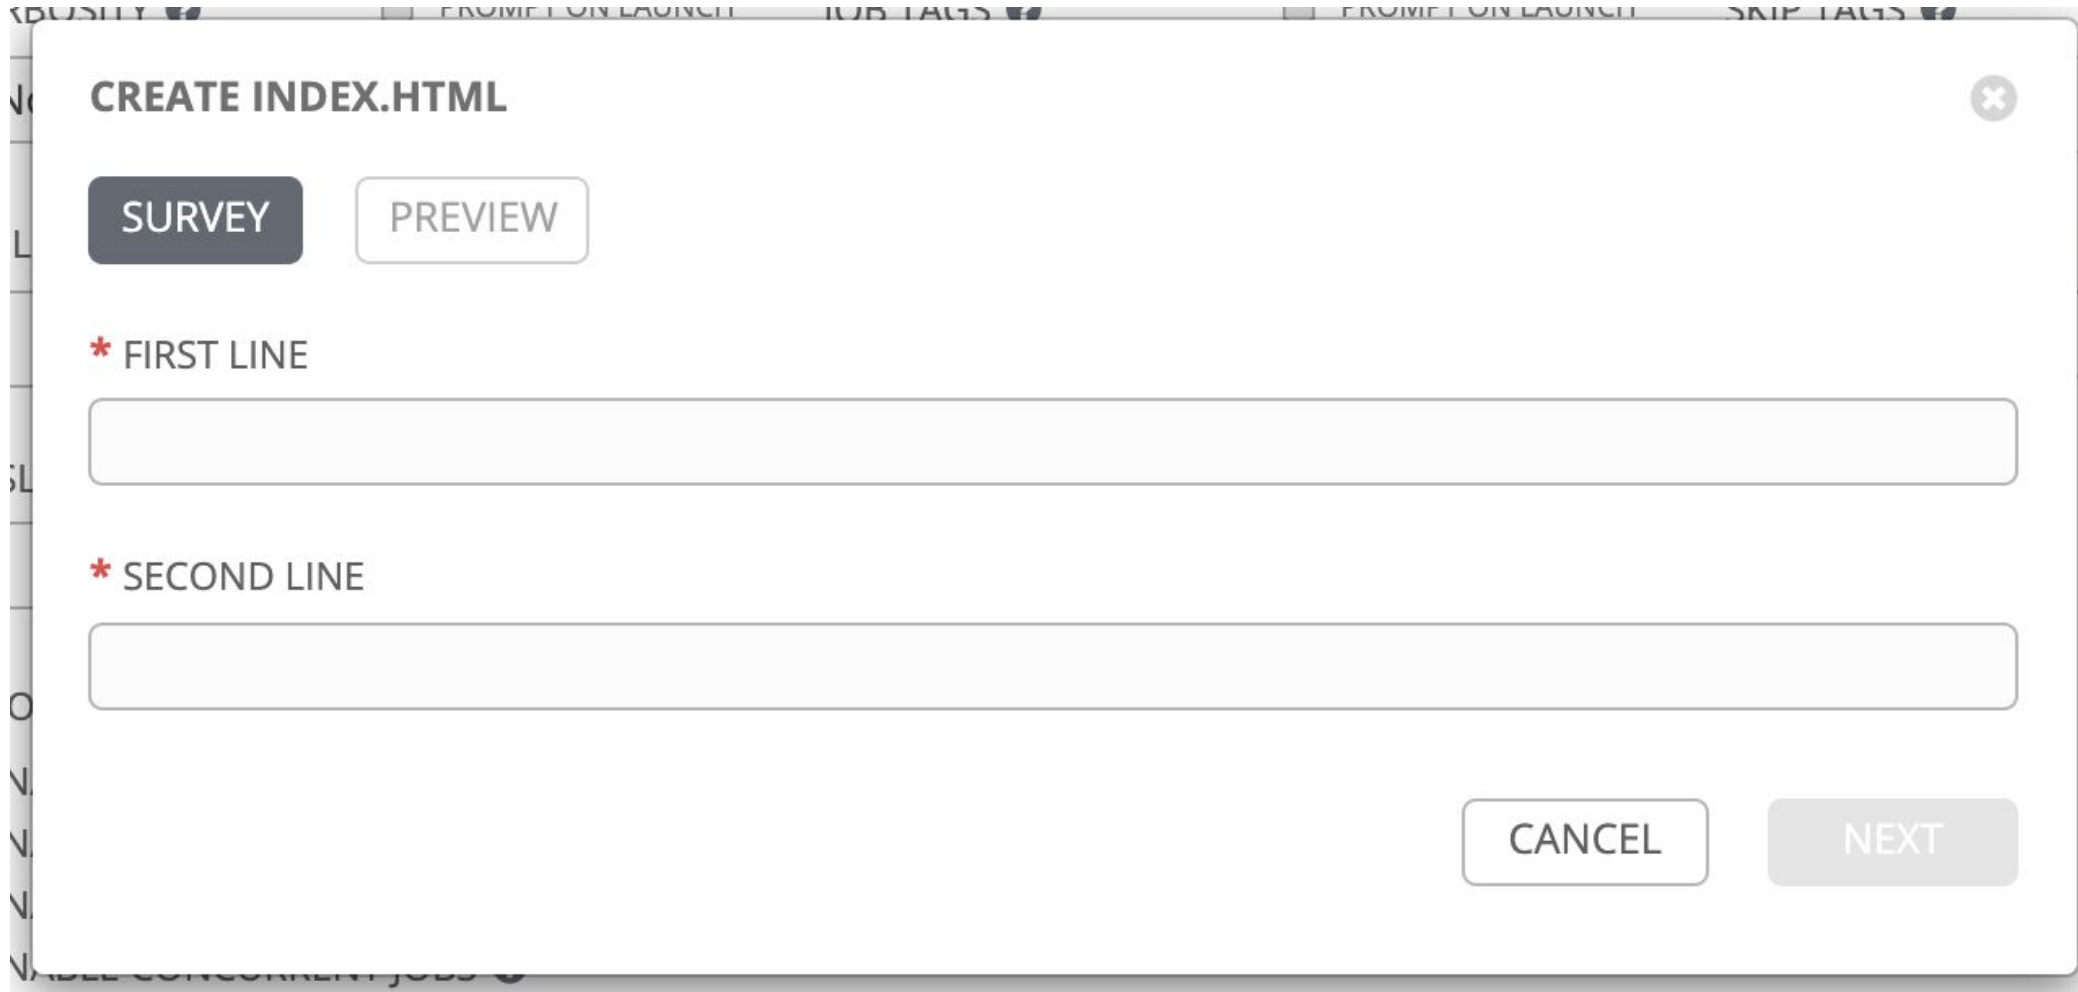

The right pane, titled 'PREVIEW', shows two lines of text:

- \* FIRST LINE**: A text input field with a list icon, an edit icon, and a delete icon.
- \* SECOND LINE**: A text input field with a list icon, an edit icon, and a delete icon.

At the bottom right of the window, there are three buttons: **DELETE SURVEY** (red), **CANCEL** (white), and **SAVE** (green).

# Using a Survey

When launching a job, the user will now be prompted with the Survey. The user can be required to fill out the Survey before the Job Template will execute.

The image shows a dialog box titled "CREATE INDEX.HTML" with a close button in the top right corner. Below the title are two buttons: "SURVEY" (highlighted in dark grey) and "PREVIEW" (light grey). The form contains two required text input fields, each preceded by a red asterisk and the label "FIRST LINE" and "SECOND LINE" respectively. At the bottom of the dialog are two buttons: "CANCEL" (light grey) and "NEXT" (dark grey).

# Lab Time

Complete Exercise 4 - Surveys

---

# Exercise 5

Topics Covered:

- Role Based Access Control (RBAC)

# Role-Based Access Control. Who can use my automation?

## What is it?

Securely govern access to your automation

- ▶ Logically group controller objects and grant users and teams read, execute, edit permissions
- ▶ Use predefined roles to grant access
- ▶ Integrates with your existing enterprise authentication systems

The screenshot shows the user management interface for Honey Dog, Inc. The breadcrumb trail is Organizations > Honey Dog, Inc. > Users. The page title is Honey Dog, Inc. with an Edit organization button. The navigation tabs include Back to Organizations, Details, Users (selected), Administrators, Teams, Execution Environments, and Notifications. The main content area shows a search filter for Username containing 'contains' and an Add users button. Below the search is a table of users:

Username	User type	Email	First name	Last name	Last login
<input type="checkbox"/> austin78	Normal user		Austin	Austin	
<input type="checkbox"/> jdoge	Platform auditor		Josie	Josie	
<input type="checkbox"/> jgarcia	Normal user		Jerry	Jerry	

At the bottom right, there is a pagination indicator showing 1-3 of 3 and a page number 1 of 1.

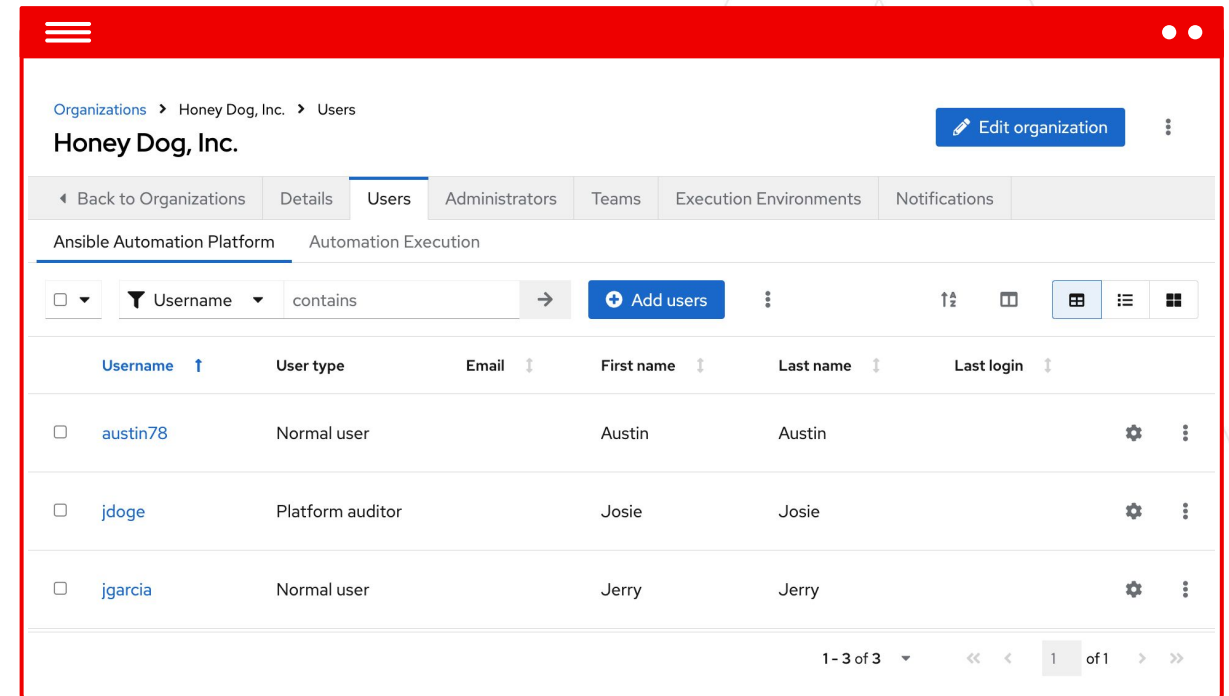

# User Management

## What is it?

Securely govern access to your automation

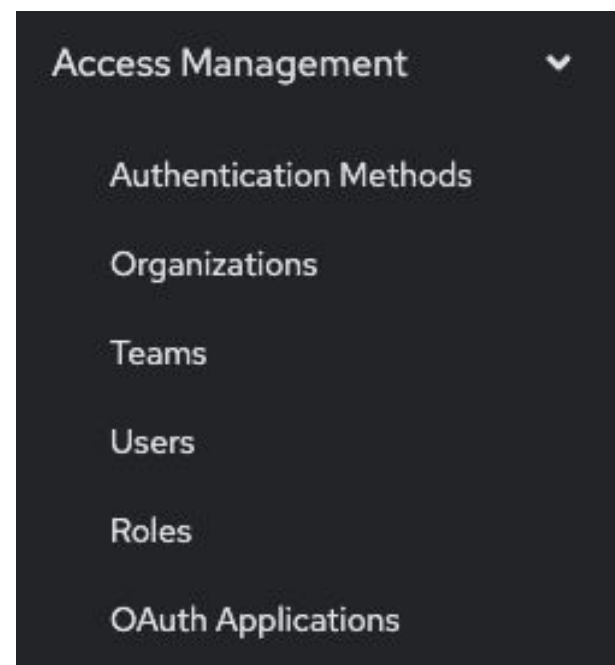

- ▶ Logically group controller objects and grant users and teams read, execute, edit permissions
- ▶ Use predefined roles to grant access
- ▶ Integrates with your existing enterprise authentication systems

# User Management

Govern access to your automation

- ▶ An **organization** is a logical collection of users, teams, projects, inventories and more. All entities belong to an organization.
- ▶ A **user** is an account to access Ansible Automation Controller and its services given the permissions granted to it.
- ▶ **Teams** provide a means to implement role-based access control schemes and delegate responsibilities across organizations.

# Lab Time

Complete Exercise 5 -  
Role Based Access Control

---

# Exercise 6

Topics Covered:

- Red Hat Enterprise Linux System Roles

# Automation Hub and Ansible Galaxy

# Linux System Roles

- Consistent user interface to provide settings to a given subsystem that is abstract from any particular implementation
